

Research Study Clemson University

Creative Media Production Bootcamp

An afterschool camp promoting interest-based and creative media production for middle schoolers.

Researchers at Clemson University are looking for **15 – 20 middle schoolers aged 12-15 years (6 – 8 grades)** to participate in a study to help us understand how creative media production might assist students in determining ways to use credible information. This afterschool camp will encourage adolescents to collaboratively design and produce media about issues they care about – to help make their voices heard and solve immediate local and societal problems. We are also interested in learning how they address misinformation they encounter during their media creation. During the camp, they will creatively use media tools to create video essays, photo stories, digital stories, podcasts, etc. The Creative Media Production Bootcamp will be conducted in 6 weeks, depending on the availability of students.

Process/ design

Week 1 (2 times a week for approximately 1 hour) – Students will explore media use in their daily. They will develop their Technobiography (i.e., explore the time they spend on media usage and their access to tech. tools, and highlight their favorite tech tools); select and evaluate media and their sources; identify how media can solve problems and use print, visual, audio, and interactive media to solve problems.

Week 2 (2 times a week for approximately 1 hour) - Students will explore information (how to Investigate the accuracy of the news stories and peoples' responses, etc., how to tell accurate information from false information, how to reinforce the credibility of news items using facts, etc.) and play games. They will explore the importance of information in society by playing Lamboozled. They will discuss possible solutions to problems identified in week one.

Week 3 (2 times a week for approximately 1 hour) – Students will explore ways others create media. They will then use different techniques to create their own media such as memes, advertisements, infographics, podcasts, videos, etc.

Student Showcase

Week 4 – 5 (2 times a week for approximately 1 hour) – Students will showcase their work! They will produce and share their media through video creation, photo stories, digital stories, podcasts, or whatever they choose and enjoy. They will create a digital media portfolio at the end of the production process that they can continue to add to or tinker with after the study ends. Each child will be asked about their experience via an interview.

If you want to learn more about the research study, please contact one of the study investigators listed below. We will provide more information about the project and answer your questions.
Thank you!
